

Overview

INDUSTRY	MATERIAL	MESSAGE	TECHNOLOGY
 Automotive	 Rubber	 2D Code, Human Readable Text	 Environmentally friendly laser system requires no ink or consumables

Objective

An industry-leading automotive supplier required permanent marking identification information on a variety of extruded rubber door seals and gaskets.

0081 **Crisp, highly legible, marks on rubber**

Extruded rubber door seal marking

Ability to mark within tight tolerances

Solution

e-SolarMark+ CO2: Matthews laser produces a high-quality and contrasting code

Operating speeds that accommodate production rates up to 80 feet per minute

Quality at High Speeds

Lower Costs

Seamless Integration

e-SolarMark

Matthews' Marking Systems proposed the e-SolarMark+ CO2 laser marking and coding system. The laser system produces permanent vector-quality marks of variable text, as well as date and time codes, serial number, barcodes, 2D codes and graphics, at high speeds.

Results

\$5,680 Saved per year in a drastic decrease in downtime and consumable costs

The automotive supplier saw a total return of investment within 6 months

Re-work due to incorrect or illegible codes was eliminated
